COMMENTS:

| Test Name | In Range | Out Of Range | Reference Range | Lab |
|-------------------------------|----------|--------------|-----------------|-----|
| BRUCELLA AB, AGGLUTINATION | <1:80 | | titer | |

REFERENCE RANGE: <1:80

The most reliable serologic indicator of brucellosis is a four-fold increase in antibody titer when testing acute and convalescent sera in parallel. In the absence of paired sera, a single specimen titer of 1:80 or greater is consistent with brucellosis in a patient with a compatible clinical history.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
