COMMENTS:

Test Name	In Range	Out Of Range	Reference Range	Lab
PROTEINASE-3 ANTIBODY	<1.0		AI	
		Value	Interpretation	
		-----	-----	
		<1.0	No Antibody Detected	
		> or = 1.0	Antibody Detected	

Autoantibodies to proteinase-3 (PR-3) are accepted as characteristic for granulomatosis with polyangiitis (GPA, Wegener's), and are detectable in 95% of the histologically proven cases. The cytoplasmic IFA pattern, (c-ANCA), is based largely on autoantibody to PR-3 which serves as the primary antigen. These autoantibodies are present in active disease.
