REFERENCE RANGE: NOT DETECTED

Seroconversion demonstrated by a 4-fold or greater increase in IgG titer or a single IgG titer of > or = 1:128 is considered presumptive laboratory evidence of current or past infection. Antibodies may persist for months to years after clearance of infection. Serologic cross reactivity between closely related organisms, such as Anaplasma species, can occur.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by the FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
