

Patient Information	Specimen Information	Client Information

COMMENTS:

Test Name	In Range	Out Of Range	Reference Range	Lab
HSV 2 IGG, W/REFL HSV 2 INHIBITION HSV 2 IGG, TYPE SPECIFIC AB	<0.90		index	
	Index	Interpretation		
	-----	-----		
	<0.90	Negative		
	0.90-1.09	Equivocal		
	>1.09	Positive		

This assay utilizes recombinant type-specific antigens to differentiate HSV-1 from HSV-2 infections. A positive result cannot distinguish between recent and past infection. If results are negative or equivocal, consider repeat testing in 4-12 weeks with a new specimen. The performance characteristics of the assay have not been established for pediatric populations, immunocompromised patients, or neonatal screening.

Positive HSV-2 IgG samples with index values between 1.10-6.00 will reflex to the HSV-2 IgG inhibition test.
