COMMENTS:

Test Name	In Range	Out Of Range	Reference Range	Lab
PARVOVIRUS B19 ANTIBODIES (IGG, IGM) PARVOVIRUS B19 ANTIBODY (IGG) REFERENCE RANGE: <0.9 INTERPRETIVE CRITERIA: <0.9 Negative 0.9 - 1.1 Equivocal >1.1 Positive IgG persists for years and provides life-long immunity. To diagnose current infection, consider Parvovirus B19 DNA, PCR.	0.2			
PARVOVIRUS B19 ANTIBODY (IGM) REFERENCE RANGE: <0.9 INTERPRETIVE CRITERIA: <0.9 Negative 0.9 - 1.1 Equivocal >1.1 Positive Results from any one IgM assay should not be used as a sole determinant of a current or recent infection. Because IgM tests can yield false positive results and low levels of IgM antibody may persist for months post infection, reliance on a single test result could be misleading. If an acute infection is suspected, consider obtaining a new specimen and submit for both IgG and IgM testing in two or more weeks. To diagnose current infection, consider Parvovirus B19 DNA, PCR.	0.1
