

Patient Information	Specimen Information	Client Information

**COMMENTS:**

Test Name	In Range	Out Of Range	Reference Range	Lab
HEPATITIS E VIRUS AB (IGG, IGM)				
HEV IGG	NOT DETECTED			
HEV IGM	NOT DETECTED			

REFERENCE RANGE: NOT DETECTED

Detection of IgM against HEV indicates current or recent infection while detection of IgG indicates previous exposure. Results should be correlated with patient risk factors and signs and symptoms consistent with hepatitis E. False positive results can occur in low prevalence populations. False negative results can occur early during infection.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
