VARICELLA ZOSTER VIRUS AB
(IMMUNITY SCR),ACIF (S)

> or = 1:4

REFERENCE RANGE: > or = 1:4

<1:4 Antibody Not Detected - evidence for susceptibility to VZV infection.

> or = 1:4 Antibody Detected - evidence for immunity against VZV infection.

A positive titer (greater than or equal to 1:4) indicates a history of VZV infection or vaccination. In infected individuals, this test is usually positive within 2 days after the onset of rash and is therefore positive for life. The absence of detectable antibody may indicate susceptibility to VZV infection.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
