

Patient Information	Specimen Information	Client Information

COMMENTS:

Test Name	In Range	Out Of Range	Reference Range	Lab
DENGUE FEVER AB (IGG)	0.06			

REFERENCE RANGE: <0.80

INTERPRETIVE CRITERIA:
 <0.80 NEGATIVE
 0.80-1.09 EQUIVOCAL
 >=1.10 POSITIVE

This assay detects IgG antibodies against all four Dengue virus types, and the antibody response to Dengue fever is not type specific.

The presence of IgG in the absence of IgM may indicate either recent or past infection. Before day 6 of symptoms, both IgM and IgG may be negative, and alternate testing (Dengue NS-1 Antigen or Dengue PCR) is recommended. Cross-reactivity with other flaviviruses is known to occur; the extent and degree of serologic cross-reactivity varies.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
