COMMENTS:

Test Name	In Range	Out Of Range	Reference Range	Lab
TRYPANOSOMA CRUZI AB, TOTAL W/REFL CONFIRM TRYPANOSOMA CRUZI AB, TOTAL			NONREACTIVE	

REFERENCE RANGE: NONREACTIVE

The enzyme immunoassay for T. cruzi (Chagas disease) total antibodies is sensitive and specific for acute or chronic American trypanosomiasis. However, cross-reactivity may be observed in patients with leishmaniasis. Specimens with an indeterminate or reactive total antibody result are tested using a confirmatory T. cruzi IgG lateral flow assay that uses different antigens as per CDC recommendations. A positive confirmatory assay result supports the diagnosis of Chagas disease, whereas a negative confirmatory assay result suggests the total antibody result was falsely indeterminate/reactive.
