COMMENTS:

Test Name	In Range	Out Of Range	Reference Range	Lab
BABESIA MICROTI AB (IGG, IGM)W/REFL TITERS BABESIA MICROTI AB (IGG), SCREEN	NOT DETECTED			
BABESIA MICROTI AB (IGM), SCREEN	NOT DETECTED			

REFERENCE RANGE: NOT DETECTED

Confirmation with a blood smear or PCR is recommended for diagnosis of acute Babesiosis. A single acute antibody titer is not sufficient to establish a diagnosis. IgG titers > or = 1:1024 or presence of IgM suggest recent infection. Antibodies may persist for months to years after clearance of infection. The extent of cross-reactivity between Babesia species is variable and other species (e.g., Babesia duncani) may not be detected by this assay.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by the FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
