

— Prenatal Health

Prenatal testing provides information about a baby's health before he or she is born. Some routine tests during pregnancy also check on the mother's health. At the first prenatal visit often one will test for a number of things, including problems with the blood, signs of infections, and whether one is immune to rubella (German measles) and chickenpox.

Throughout ones pregnancy, you may tests for gestational diabetes, Down syndrome, and HIV. Other tests might be based upon age, personal or family health history, ethnic background and results of routine tests
