

— Infections

Infectious diseases are disorders caused by organisms; such as bacteria, viruses, fungi or parasites. Many organisms live in and on our bodies. They're normally harmless or even helpful, but some organisms under certain conditions may cause disease.

Some infectious diseases can be passed from person to person while some are transmitted via bites from insects or animals. Others are acquired by ingesting contaminated food or water or other exposures in the environment.

Signs and symptoms vary, but often include fever and chills. Mild complaints may respond to home remedies, while some life-threatening infections may require hospitalization.

Fungal Infections

A fungus is a primitive organism. Mushrooms, mold and mildew are examples. Fungi live in air, in soil, on plants and in water. Some live in the human body. Only about half of all types of fungi are harmful. Some fungi reproduce through tiny spores in the air. You can inhale the spores or they can land on you. As a result, fungal infections often start in the lungs or on the skin. You are more likely to get a fungal infection if you have a weakened immune system or take antibiotics. Fungi can be difficult to kill. For skin and nail infections, you can apply medicine directly to the infected area. Oral antifungal medicines are also available for serious infections.

COCCIDIOIDES AB, CF, SERUM

Result Comments

REFERENCE RANGE: <1:2

INTERPRETIVE CRITERIA:

<1:2 Antibody Not Detected

> or = 1:2 Antibody Detected

All serum titers > or = 1:2 should be considered evidence indicative of coccidioidomycosis, although titers of 1:2 and 1:4 should be confirmed by immunodiffusion testing. Titers exceeding 1:16 usually reflect disseminated disease. In general, higher titers are correlated with disease severity, and changes in serial titers are of prognostic value. A negative CF test does not, however, rule out the diagnosis. Only 70% of patients with cavitary disease are positive, and only 30% of patients with nodular disease are positive.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
